```java
package com.example.phms.dao.impl;

import com.example.phms.dao.UserDao;
import com.example.phms.config.DBConnectionUtil;
import java.sql.*;

public class UserDaoImpl implements UserDao {
    @Override
    public boolean login(String email, String password, String role) {
        try (Connection con = DBConnectionUtil.getConnection()) {
            String sql = "SELECT * FROM users WHERE email=? AND password=? AND role=?";
            PreparedStatement ps = con.prepareStatement(sql);
            ps.setString(1, email);
            ps.setString(2, password);
            ps.setString(3, role);
            ResultSet rs = ps.executeQuery();
            return rs.next();
        } catch (Exception e) {
            e.printStackTrace();
            return false;
        }
    }
}
```
